Assignment 1 Technical Report

HTML:
We used <iframe> to display our picture and information combinations within the same page by using JavaScript functions to inject a html page into the src attribute of the <iframe> tag.
<Table> The table tag was used to maintain even spacing between the image and the text. This allowed us to have consistent spacing even with different image sizes and orientations.
 The unordered list tag was used to keep text looking clean and organized. It was also used in the drop-down menus for the artists and art pieces.

CSS:
Google font: 'Supermercado'. We used a font-family from Google fonts and included a fallback font, 'cursive', in case the font could not be accessed in the link
Background-image. A generic abstract image for the background of the site.
Height, width, text-align, padding. Used to adjust webpage size aspects and text spacing accordingly to achieve the design we envisioned.

Links:
All the links in our work were either a link to a local image/html page.

Other:
JavaScript functions were used to load the right page depending on the user selection.
Bootstrap framework - grid system (container)
